

## Personal Details

I see myself as an; efficient, meticulous, determined, analytical person, always willing to learn and experiment to help improve the quality of my work. I believe that i operate at my best in a well co-ordinated, hardworking and intelligent team.

When given a problem, i prefer to Immerse myself in the problem space. Analysing all the angles, and processes that form it. With this information i can then leverage the best technologies suited to the problem to create a solution.

At the moment I'm between my 2<sup>nd</sup> and 3<sup>rd</sup> year of a Honours Degree in Software Engineering at Southampton Solent University.

## Technical Skills

### Languages
